

Core making division is a very important section in our foundry. Because almost all the components manufactured at "Unimetal" are cored ones. We produce almost 2,00,000 cores per month.

We have our own Resin Coated Sand plant with Rotary Sand Drier. Resin Coated Sand has a strict quality control by using Stick Point Tester, Peel Back Tester, Hot Tensile Strength Measuring machine and Sieve Shaker, Core Gas Evolution tester.

Cores are produced on Automatic Shell Core Shooters with high efficiency and productivity. Rejection Rates are among the lowest in Industry
